

Bachelor of Information Technology

"Gender has nothing to do with a person's knowledge or ability to learn new things in the I.T. industry, Heather McDonald says."

Information Technology skills are needed everywhere.

IT is problem solving. Trouble shooting. Critical thinking. Creating. Designing. Building. It's working alone or working with people.

This is an applied degree so you'll learn by doing. You'll gain the skills and practical knowledge to go straight into a job when you graduate.

Why study IT at Otago Polytechnic?

Practical skills

Learn what Information Technology professionals do through hands-on and practical work. Build the communication skills you need to work effectively in the industry.

First year covers a broad general knowledge of IT. Key topics come up again through the year, and you'll address them with more depth each time as you learn more and understand more.

For second and third year you can focus on an area that interests you most:

- Software development
- IT infrastructure and operations
- Network engineering
- Alternative digital platforms (hardware, IoT, etc.)

Courses include Databases, Automation and Robotics, Mobile App Development, Advanced Networking, UX Engineering, Game Development, AI and Data Science, and the Internet of Things and Cloud Development. There's even the option of doing a course from a programme outside of the BIT!

Have fun

Study in a creative, innovative and supportive environment. With small class sizes, you'll receive plenty of one-on-one attention from your experienced lecturers.

Get work ready

Our graduates jump into a range of jobs in the industry as we teach you what employers want. Our grads enjoy jobs such as Web Developer, Systems Administrator, Software Developer, Programmer, Business Analyst, Database Administrator or Computing Services Manager.
