Already practising as a registered midwife but want to develop advanced skills through independent research and scholarship?

This internationally-recognised programme has a strong research focus and builds on the knowledge and skills gained during the [Postgraduate Diploma in](#)

[Midwifery](#) through the provision of more demanding and intensive study. There are two options for completing this programme. You can complete a 120 credit midwifery thesis or in some instances a 60 credit midwifery dissertation. The thesis option enables you to complete a piece of original research based on higher order skills of analysis and critical evaluation. Both pathways also require the completion of two compulsory prerequisite courses: Knowledge and Theory in Midwifery, and Research Methods in Midwifery.

During this programme, you will benefit from the support and advice from experienced lecturers and make use of our extensive networks to increase your career prospects. You are required to attend two Thesis Schools annually; these are online so you can attend from wherever you are studying. The Thesis Schools are an opportunity for you to present your progress to lecturers and your peers in the programme, to seek feedback and contribute to the discussions about the work of others, a fertile ground for great ideas!
